

Project

RF Test Printed Circuit Board

Application

Equipment for Advanced Research Purposes

Customer Need

Customer was experiencing performance issues with a RF test board incorporated into their test equipment. Specifically, the RF signal roll-off was unacceptable at higher frequencies in a portion of the circuit.

AVID's Solution

For minimal cost, AVID was able to review and make several innovative suggestions to improve the PCB layout, significantly optimizing the performance of the board.

Value Added or Technologies Applied

- Schematic Consultation and Review
- PCB Layout Consultation and Review
